

- Pneumatics

Technique of fluid pneumatic versus technology. The pneumatic one gets passionate to us. We are able to make any circuit that imagines. We are specialistic in fluid controls. First which we consider it is the security of the people and the equipment. The ergonomycs and the regime of work are of the following terms to have in consideration. Installed equipment keys in hand; automatic floodgate: - using compressed air to raise the floodgate, the reduction becomes by gravity (for more security), is interconnected with the domotic of the house. - We used quiet super equipment and of very high quality. - without tension or compressed air floodgate (security) can be opened.
